

People are more vulnerable than Systems.

Key Benefits

- Automation & Awareness of Corporate Security Policies
- Manages Cyber Security Awareness Campaigns
- Provides Centralized Dashboard for Cyber Readiness
- Empowers CISO to embed Cyber Security in Organization Culture

It's time for Corporates to be CyberWise.

Cyber Wise

Cyber Wise is an online Cyber Awareness Management System for corporates to manage and create cyber awareness campaigns. The online portal contains content across cyber security, corporate policies, security guidelines, preventive measures and secure computing guidelines. A CISO can assign a content to any resource/department based on their job description, set KPI's and monitor the campaign across entire organization and share the results with senior management through a single dashboard.

Cyber Security: Where do we stand

While organizations continue to reap on the benefits of internet, yet they continue to remain vulnerable. Every day we hear incidents related to security breaches, financial loss and tarnished corporate reputation through sophisticated malwares, highly organized Spamming and phishing attacks and insider threats. "390,000 new malicious programs are registered everyday" says AV Institute.

Technology Alone is not a Solution

Cyber threats are at large despite organizations having full range of technology based controls including anti virus, firewalls, IPS, Email & Web Gateways etc. Whether it's a conficker or Ransomware, organizations are found struggling to maintain a secure IT infrastructure proving the point that "Technology alone cannot guarantee a secure computing environment"

Cyber Awareness for Employees in the Key

People are the nucleus of the confidentiality, Availability and Integrity triad of Information Security. Majority of the cyber security breaches occur due to the employee's lack of knowledge about cyber security, their responsibilities towards corporate data security. Internet users are often easy prey to the phishing attacks allowing sophisticated malware to enter the organization.

Key Features

Content

- SCORM Compliant Authoring for Cyber Security Content
- Automate Content Enrollments
- Assign Due Dates and Expirations
- Create Content Catalogs
- Content Search Capability
- Assign Course Prerequisites
- Award Certificate

User Management

- Self-Registration and Enrollment
- Configurable User Profiles
- Create User Groups
- Batch Upload Users or Synchronize to HR Systems
- Active Directory Integration
- Configurable Email Notifications

Reporting

- More than 15 built-in reports
- Campaign Management
- KPI Monitoring for Cyber Security

Built in content Includes

Cyber Security Awareness – Basic

- Understanding Information Security
- People are most vulnerable
- Practice Safe Computing
- Social Engineering
- Password Management
- Email Security

Micro Learnings

- What is Malware?
- What is Phishing?
- Reporting Security Breaches
- Symptoms of being Hacked
- Security for Management
- What is Ransomware?
- What is spamming?
- What is spyware?
- Identity & Theft
- Cyber Extortion

Cyber Security Awareness – Advance

- Mobile Device Security
- Data Security
- Data Destruction
- Wi-Fi Security
- Insider Threats
- Physical Security

Incident Series

- Saudi Aramco, Cyber Security Breach
- Ras Gas, Qatar's largest utility company attacked
- Estonia, A country under attack
- Stuxnet, The story in Iran
- Sony Corporate, It's all about an interview
- JP Morgan Bank, Cyber Security Breach
